
BRANDLE OS – ENGRAMAESTRO THREAD VAULT (INTEGRATED)

“Nothing is lost. Everything is indexed.”
“Receipts are not optional. They are memory.”

PART VI – ENGRAMAESTRO THREAD VAULT + PROMPT SEEDING

› SOURCE INGESTED

..... 1 ENGRAMAESTRO_THREAD_VAULT_Brandle_dRANb_v1_0_2026-02-02 1.pdf
..... v1.0 · 2026-02-02 · America/Los_Angeles

› WHAT THIS DOCUMENT ADDS (SYSTEM LEVEL)

..... 1) Thread Vault format: Message Index + Vault (Verbatim)
..... 2) Artifact cards with immutable metadata (Type/Speaker/Status/Source/SHA256)
..... 3) “Preserve exactly” rule + explicit truncation markers (“...”)
..... 4) Canon production prompts embedded as artifacts (dRANb / brandL / 4IELD)

› PLATFORM IMPLEMENTATION (BRANDLE OS)

V4ULT → Thread Vault (ENGRAMAESTRO)

- Import: upload/paste transcript or Engramaestro doc
- Parse: artifacts + message index
- Hash: SHA256 per artifact content (stored as receipt)
- View: filter by Speaker / Type / Status / Date
- Export: Engramaestro v1.0 (TXT/PDF) + JSON export
- Lock: immutable versions (new imports create new vault versions)

› PROMPT VAULT SEEDING (CANON)

..... Seed 3 canonical prompts as read-only PromptVaultArtifact entries:
..... - dRANb sha256 6385135a293f6f17...
..... - brandL sha256 6385135a293f6f17...
..... - 4IELD sha256 6385135a293f6f17...

› ACCEPTANCE CRITERIA

..... ☐ Import creates a message index (Msg #, Speaker, Role, Type, Subject 5 words)
..... ☐ Each artifact stored with immutable fields + sha256 + raw content body
..... ☐ Vault renders verbatim blocks without normalization (no “helpful edits”)
..... ☐ Export reproduces Engramaestro structure + preserves ellipses as literal “...”
..... ☐ Prompt Vault now contains the 3 canon prompts + version tags

› SECURITY & GOVERNANCE COMPATIBILITY

..... - Tier C immutable logs remain append-only (imports create audit events)
..... - Share links redact private artifacts by default
..... - Oblivion: removes user-identifying artifacts while preserving anonymized log

› LOVABLE EDIT PROMPT (PASTE INTO CANON PROJECT)

..... Open <https://lovable.dev/projects/89d53020-feae-4084-b26c-f0031952266e>
..... Paste the “Lovable Update Prompt” from this pack to add Thread Vault features.

.

Benediction: If it isn't preserved, it isn't real.
