

“Decisions are the real product.”
“If it’s not visible, it’s not trustworthy.”

PART I – FOUNDATION & dRANb (ENGINE I)

› STATUS

..... Implemented into BRANDLE OS build spec: Foundation principles, ecosystem scaffold,
..... All compliance guardrails are encoded as product copy & system behavior (best-effort)
..... Navigation shells are prepared for brandL, 4IELD, 4TRESS; V4ULT ships as an appendix

› WHAT THIS PART DELIVERS (MVP)

..... dRANb Naming Engine: Intake → Generate → Evaluate → Compare → Shortlist → Decide →
..... Receipts-first UX: every name shows scores, penalties, strengths, risks, & confidence
..... Digital viability signals (heuristics only): domain/handle likelihood + linguistic
..... Name Decision Report export: PDF + TXT + JSON artifacts stored per project.
..... V4ULT event log: immutable archive of runs, decisions, artifacts (append-only).

› DATA MODEL (PART I)

..... User / Workspace / Membership(role)
..... Project (Naming Project) → BrandBrief (structured intake)
..... NameSet (mode + params) → CandidateName → NameScore (dimensions + penalties +
..... ShortlistEntry (Strong+Safe / Strong+Bold / Creative Risk)
..... Decision (chosen name + rationale + risks + mitigations + next steps)
..... ExportArtifact (PDF/TXT/JSON metadata + file url)
..... V4ULT_ArchiveEvent (append-only: run created, names generated, shortlist updated, ...)

› dRANb – WORKFLOW IMPLEMENTATION NOTES

..... Intake captures BrandBrief fields + 7 personality sliders (0–100) + risk tolerance
..... Generate creates multiple NameSets per project; each NameSet tagged by one of 6 Modes
..... Evaluate computes 0–100 scores per dimension: Memorability, Pronunciation Clarity,
..... Penalties apply (examples): ambiguous spelling, competitor resemblance, generic keywords
..... Compare renders a matrix with dimension scores, top 3 strengths, top 3 risks, & viability
..... Shortlist sorts candidates into: Strong+Safe, Strong+Bold, Creative Risk.
..... Decide finalizes selection: pronunciation guide, rationale bullets, risk notes + mitigation
..... Export generates a copy/paste-ready Name Decision Report in PDF/TXT/JSON; artifacts

› COMPLIANCE & TRUST GUARDRAILS (ENCODED)

..... No guarantees. Only best-effort estimates + confidence levels displayed everywhere

..... No scraping claims. MVP viability uses heuristics only; future API lookups must be
..... No legal advice. Trademark guidance is framed as readiness signals + prompts to co
..... Procedural intelligence. Every action writes a V4ULT receipt: inputs, parameters, (
